Graf Course on Ultrasound in the Diagnosis and Management of Developmental Dysplasia of the Infant Hip

19 - 21 May 2016 - Dublin

The National Clinical Programme for Paediatrics and Neonatology, in association with Dr Sally Scott FRCR is pleased to announce a 2.5 day course on ultrasound in the diagnosis and management of developmental dysplasia of the hip (DDH).

The course will take place in the National Maternity Hospital, Dublin 2 and will follow the same format as those held by Dr Scott in England for many years. The guest lecturer is Professor Reinhard Graf, Professor of Orthopaedics at the University of Graz, Austria.

This course is especially beneficial when multidisciplinary teams working with infant hip dysplasia attend. It is suitable for radiologists, sonographers, orthopaedic surgeons, paediatricians, and physiotherapists.

The aim is to give participants a thorough understanding of the role of ultrasound in the diagnosis and management of developmental dysplasia of the hip (previously known as congenital dislocation of the hip).

The course is both theoretical, covering the pathology, diagnosis and management of DDH, and practical, with “hands on” ultrasound sessions. Management based on ultrasound findings will be discussed. Questions such as the choice of equipment and how to set up an ultrasound service will be addressed.

CME points applied for.
